Losing Important Files is Never A Good Thing Suppose you're working on a high-priority multi-sheet Excel workbook (tracking sales record) and simultaneously preparing Word templates and PowerPoint presentations to give it a visual kick, and suddenly, out of nowhere, before saving all your files you accidentally end up closing all the windows or your Mac shuts down unexpectedly.

Go to Trash, locate the files Due to sudden Mac shutdown the unsaved files are lost, in such cases chances are bleak that you'll find the lost files in Trash, however as first line of action the least you can do is Check the Trash.

NOTE: Older comments have been removed to reduce database overhead Can i change temporary folder for just 3rd software? I have no problem with temporary files created by windows, actually i dont care about temporary files, but one of my 3rd software always make my temp folder full of crap, and my (:c) dont have much space left.
